

In 2004, the sub-department launched a student research club. At the meetings of the club, students present reports on the results of research works.

Main student research fields are as follows:

1. Medical anthropology.
2. Historical anthropology.
3. Paleopathology.
4. Macro and micromorphology of the thyroid gland.
5. Morphology of xenomaterials.

Students' research works are annually presented at a university scientific and technical conference of PSU's students and staff. The best student works are published in inter-university collected articles and peer-reviewed journals as well as presented at international, All-Russian and regional conferences.

Student Research
