

In 2010, the sub-department launched a student research club. At the meetings of the club, students present reports on the results of research works.

The main student research fields are as follows :

1. Development of the methodology of the microbiological experiment and its formulation
2. The study of methods for the isolation and identification of microorganisms: bacterioscopy, plating and cultivation in nutrient media, biochemical methods of identification, etc.
3. The study of the etiology, pathogenesis and clinical manifestations of the main nosological forms of infectious diseases in Penza region.

Students' research works are annually presented at a university scientific and technical conference of PSU's students and staff. The best student works are published in inter-university collected articles and peer-reviewed journals as well as presented at international, All-Russian and regional conferences.
