# General information

The «Pediatrics» sub-department provides training of students in «Pediatrics» in the course of **31.05.01 «General Medicine»** program.

The sub-department graduates students in the specialty **31.05.02 «Pediatrics»**. According to this program, the sub-department trains students in the following disciplines:

- «Propaedeutics of childhood diseases»;
- «Faculty pediatrics, endocrinology»;
- «Hospital pediatrics»;
- «Outpatient and emergency pediatrics».

# Pediatrics

The goal of studying the discipline is to form students' theoretical and practical knowledge, skills and abilities in the field of diagnostics, treatment tactics, clinical examination, prevention of the most common diseases in infants and older children, as well as providing emergency and medical care depending on the disease.

The objectives of the discipline are to study the anatomical and physiological characteristics of the organs and systems of a healthy child; to study the etiology, pathogenesis, classical clinical manifestations, the course of a disease, the principles of diagnostics and treatment of the most common diseases and emergency conditions of childhood; to study the principles of organization and directions of work in promoting a healthy lifestyle of children and their families.

The main provisions of the discipline are necessary for the study of the following clinical disciplines: polyclinic therapy; infectious diseases; neurology, medical genetics; resuscitation and intensive care.

# Teaching techniques

Teaching at the "Pediatrics" sub-department is distinguished by its focus on actual problems and imitation of future professional activities. Apart from classical teaching material, the following active instructive methods are adopted for students and clinical residents:

- theme lectures and seminars;
- real clinical case analysis;
- imitating exercises, practical skills training;
- business games, discussions, brainstorming;
- creation of theme presentations and projects with subsequent defense;
- research projects, scientific and practical conferences.

# Clinical base of the sub- department

**Regional Children Hospital named after N.F. Filatov**  
( 43 Bekeshskaya street, 440008, Penza )

The head of the «Pediatrics» sub-department is L.A. Musatova, Ph.D. in medicine, associate professor.

She is the author of over 100 scientific works: over 30 teaching aids, 10 articles, over 60 theses.

Research fields – the health status of children born to mothers with arterial hypertension, issues of feeding premature babies and young children; viral hepatitis issues.
