Baulina, Ph.D. in medicine, associate professor, M.V. Ishkova, senior lecturer, E.A. Tsarapkina, leading document-keeper.

Educational environment

For educational purposes, the sub-department possesses 5 specialized classrooms located in leading medical institutions of Penza.

Simulation classroom

Student Research

In 2003, the sub-department created a student research club. At the meetings of the club, students present reports on the results of research works.

Main research fields of the students research club are as follows:

- Early diagnosis and prevention of complications in obstetrics and gynecology.
- Purulent-inflammatory diseases in obstetrics and gynecology.

Students' research works are annually presented at a university scientific and technical conference of PSU's students and staff. The best student works are published in inter-university collected articles and peer-reviewed journals as well as presented at international, All-Russian and regional conferences.

Postgraduate education

Residency:

31.08.01

«Obstetrics and gynecology»

When getting admitted to the clinical residency, the graduates with high rating scores obtained during their studying at the university have preferences. From the moment of its establishment, the sub-department have prepared over 40 top-class obstetricians and gynecologists.

After completing the clinical residency, the most talented graduates inclined to research have a chance to continue their cooperation with the university as sub-department teachers.
